## **Windows Enterprise Announcement**

### **August 20, 2008 – Authentication Issues Document Available**

The disabling of LANMAN/NTLMv1 on the Enterprise Windows Domain exposed some issues certain systems are having with the change. Valuable information is being exchanged in the support group mailing lists (CCSG/WinAdmin/MacOSX) and meetings. ITS is collecting this information so we all know 1) What all the issues are and 2) How to solve them. The “Authentication Issues Relating to LANMAN and NTLMv1” document is available at:
