

Windows Enterprise Announcement

May 27, 2014 – Brief WINDC5 Outage May 28, 2014

On May 28, 2014 ITS must move some servers in Black Hall to a different rack. WINDC5 will be affected by this move. The move is scheduled to happen 2:00-3:00 PM and should only last a few minutes.

Most users will not notice the outage of one domain controller. Windows domain member systems will automatically fail over to one of the four remaining domain controllers. However, if you have systems that will not fail over and are pointed to WINDC5 you will notice a brief outage during the move.
